Trials with *ekolive* products

Potatoes

Pictures and experiences by farmer: First rows in field, potatoes on the right side without spots, 3 times sprayed with 350 litres/ha with 1 % concentration of *ekofertile*[®] *plant* – 3,5 litres per hectare (in total 9,5 litres of *ekofertile*[®] *plant* per hectare).

Results: yield improved – more and bigger potatoes, 2 weeks earlier development, no black spots caused by fungi disease. Rest of the field affected by fungi disease.

Trials with *ekolive* products

Pictures by *ekolive* during trial visit 3 weeks later (green rows on the right after application of *ekofertile*[®] plant)

Pictures by *ekolive* during trial visit 3 weeks later (left side after application of *ekofertile*[®] plant) – without black spots

Video with farmer Oke Martinen presenting the result, which we made during our visit of trial:

Trials with *ekolive* products

Trial on wheat at farm Bulle & Co by Felix Pahlsmeier
(<https://www.bulleundco.de/>)

Pictures and experiences by farmer: On the left side of both pictures, 2 times sprayed by 150 litres/ha with 2 % concentration of *ekofertile*[®] *plant* – 3 litres per hectare (in total 6 litres of *ekofertile*[®] *plant* per hectare).

Results: colour change to gold, bigger root system, yield improved, however no exact data collected.

Trial on wheat at farm in Krčava in 2023 arranged by Marian Baranko Marian
Krčava 128, SK-07251 Krčava, Tel: +421 949 107 482

Pictures and experiences by distributor: On the right side of picture, 2 times sprayed by 200 litres/ha with 2% concentration of *ekofertile*[®] *plant* – 4 litres per hectare (in total 8 litres of *ekofertile*[®] *plant* per hectare) as addition to liadok N fertilizer.

Results: colour change to dark green, stronger plants
