TESTAMONIAL OF "ekofertile™" SUCCESS

Dear Dr. Darina Štyriaková,

we are pleased to confirm our potential success of using the Biofertilizer "ekofertile™", a unique solution of combining microbes and minerals in a Biofertilizer, produced by an ecological bioleaching method without using electric energy during the process.

We can confirm herby our test results with this new plant stimulation and soil improvement biofertilizer product. It confirms that "ekofertile™" provides more nutrients and better soil conditions by developing a better root mass in accelerating organic substances and with the result of a better harvest quality and higher yield of crops.

We archived amazing results by using "ekofertile™" liquid on Tomato and Basil during the season. The growth of the plant tripled on Basil within 3 weeks, the stalks became very strong, and the flavour of the tomato fruit and basil was great.

Incredible Crops, we have used the "ekofertile™" liquid on Chilli and Potatoes, we done a comparison on the harvest, the crops treated with "ekofertile™" have grown much bigger.

Further we discovered a great experience by seeding spinach with the ekofertile™ agent, it's an enriched Quartz Sand with the "ekofertile™" solution. The Spinach was growing much stronger, with an creditable higher yield. In comparison without the soil improvement of the ekofertile™ agent the spinach quality decreased weeks before and was not more usable.

In addition, we done some successful tests with the company Rosa Vita d.o.o. in Croatia, a company assistance of growing different herbs in a Glasshouse for the use in natural products whose effect is reflected in DNA protection, prevention of negative effects of free radicals (ROS balance) and protection from the negative effects of UV. The cycle of growing the herbs and the yield improved significant.

The ekolive s.r.o development and our tests have convinced us, that the newly developed Biofertilizer, a combination of living microbes is a paradigm shift in solution for Plant Nutrition.

Our company decided to invest and open a focused division targeting the market with this newly developed "ekofertile™" biofertilizer and accomplishing a paradigm shift in solution of plant nutritarians. We are very satisfied with the cooperation and support of the company ekolive s.r.o.

Sincerely

Peter Czwalina
Director
