

APPLICATION

PRODUCT	TIMING	MODE OF ACTION	CONCENTRATION	FREQUENCY
microfertile[®] plant	Early stages and vegetative growth	Increases growth and chlorophyll, early vigor and cold resistance	10 L / ha	2-3 foliar applications
ekofertile[®] plant	At all stages, especially during infection/pre-dry periods	Increases root system, flower production, activates SAR and ISR; improves UV, drought and disease resistance, fruit size	10 L / ha	2-3 foliar applications

TURF AND PASTURE

Observed effects:

- Higher chlorophyll levels and faster growth
- Stronger green biomass
- More nutrient-rich plants
- Faster regeneration after mowing/ grazing
- Improved heat and drought tolerance
- Deeper root system
- Improved water use efficiency
- Increased nitrogen and phosphorus use efficiency
- Soil regeneration
- Pre/probiotics for livestock (digestion, immunity)

Do not apply before expected rain, min. 8 hours for absorption, 10-30°C, apply after rain to activate systemic resistance SAR and ISR.
